# **YELLOWSTONE COUNTY, MONTANA 2026 RSID CHIP SEAL AND CRACK SEAL PROJECT**

If you have any questions concerning this project, please contact Logan - McIsaac at the Yellowstone County Public Works Department at (406) 256-6996.

## **Addendum No. 2**

### **Chip Seal: Special Provision Specification 11 – Update:**

**11.C. Emulsified Asphalt:** *last sentence should read:* “The type of emulsified asphalt shall be CHFRS-2P.”

**11.D. Estimated Application Rates:** *ranges for application rates should be as follows.*

Emulsified Asphalt	0.42 – 0.45 gal./S.Y.
Seal Coat Aggregate	25 (+/- 2) lbs./S.Y.

**Add: 11.G. Fog Seal Option In-Lieu of 2<sup>nd</sup> Sweep:** At the contractor’s option, a fog seal application would be acceptable in-lieu of conducting a second sweeping of loose chips. If the contractor chooses this option; fog sealing should be done on all the planned subdivisions, not a combination of fog sealing and second sweeping. The same bid sheets should be used for either option, but if the fog sealing option is proposed, that should be clearly identified on all bid sheets. No measurement or payment to be made for the option of fog sealing and should be included in the total bid price for the appropriate bid item(s). Initial sweeping shall still be completed as specified.

**End of Addendum #2**
